

DOE/AE Forum | *Werner Betzenbichler* | 26 Oct 2021

EB-112

Relations with Designated Operational and Applicant Entities

# Topics

- **Synthesis report of the annual activity reports (Annex 2 to AA)**
- **DOE Calibration workshop from 12 to 13 October 2021**

# Synthesis report of the annual activity reports

## **In fact, some really good news**

- Slight increase on demand on DOE services by the CDM (strongly driven by special circumstances regarding the demand for validation along renewal of the crediting period)
- Predominately a creation of profits
- Many (unused or rarely used) resources are still in the records

## **Nonetheless future development depends on external factors**

- Use of CDM by other schemes
- Starting business under Art 6.4 PA

# Synthesis report of the annual activity reports

## However

- Most DOE business is created by other markets accepting CDM accreditation, but these markets are also “under risk”
- Reported average minimum fees are incredible low and leave strong distrust in scope and quality of such work (even when assuming that additionality for such projects is automatically given)

# DOE Calibration workshop

- Thanks for the excellent organisation and moderation of the event by UNFCCC secretariat enabling Forum Chair to attend
- Strong participation underpins the wish to repeat it on annual basis
- A special thank you for giving also insights outside the box (status of negotiations, Art 6)

**Thank you for your attention!**

Werner Betzenbichler  
Chair of the DOE/AIE Forum
